GEZMA

ONE SUPER APP

Investor Progress Report

Platform SaaS Manajemen Umrah & PPIU

Development Phase Complete

Februari 2026

Executive Summary

GEZMA One Super App adalah ekosistem digital lengkap untuk industri Umrah Indonesia yang menghubungkan travel agent (PPIU), jamaah, akademi, dan regulator dalam satu platform terintegrasi. Seluruh fase development telah selesai **100%** melalui 16 sesi pengembangan intensif. Aplikasi siap untuk tahap integrasi API production dan go-live.

144K+ LINES OF CODE	**138** API ENDPOINTS	**80** PAGES / SCREENS	**38** DATABASE MODELS
451 UNIT TESTS	**43** UI COMPONENTS	**16** DEV SESSIONS	**4** SUB-PLATFORMS

Platform Architecture — GEZMA One Super App

Ekosistem terdiri dari 4 sub-platform yang saling terintegrasi:

GEZMA Agent (B2B)

Dashboard SaaS untuk travel agent/PPIU. CRM jamaah, manajemen paket & trip, pembayaran, laporan, AI assistant, gamifikasi, white-label branding. **~100% core product.**

GEZMA Pilgrim (B2C)

Portal jamaah — 14+ halaman: tracking perjalanan, manasik online, doa & dzikir, dokumen, pembayaran, roommate matching, packing list, referral, profil.

GEZMA Academy (LMS)

Learning Management System — 12 courses, 36 lessons, quiz interaktif, sertifikat, progress tracking, course reviews.

GEZMA Command Center (Admin)

Dashboard asosiasi/regulator — compliance scoring, monitoring PPIU, auto-suspend, audit log, verifikasi dokumen.

Technology Stack

Layer	Technology	Catatan
Frontend	Next.js 16 + React 19 + TypeScript	SSR, App Router, Turbopack
Backend	Next.js API Routes (138 endpoints)	REST API, multi-tenant
Database	PostgreSQL 16 + Prisma 7	38 models, 25+ indexes
Auth	JWT + bcrypt + TOTP 2FA	3 auth systems (agent, pilgrim, admin)
AI	Google Gemini 2.0 Flash	Chat assistant widget
Infra	Docker + Nginx + Traefik	Self-hosted, HTTPS, health checks
Testing	Vitest + Playwright	451 unit + E2E tests

Development Progress

Overall Completion: 100%

Phase	Scope	Status
Phase 1: Core Agent	Auth, Dashboard, CRM, Packages, Trips, Reports, Settings, AI, PWA	Done
Phase 2A: Platform	6 platform pages (news, forum, marketplace, help, FAQ)	Done
Phase 2B: Agent Backlog	Waiting list, task management, sharing, advanced filters	Done
Phase 2C: Pilgrim MVP	Portal jamaah 14+ halaman, login booking code	Done
Phase 2D: Internal	Manasik, doa, notes, photo gallery, notifications	Done
Phase 3: Integrations	Nusuk, Payment Gateway, WhatsApp, UmrahCash	Mock Ready
Phase 4A: Advanced	Gamifikasi, Command Center, White-label Branding	Done
Phase 4B: Polish	Blockchain mock, Academy LMS, Tests, E2E	Done
Session 13: Production	Env validation, CSP, logger, storage, cron	Done
Session 14: DB & Infra	25+ DB indexes, health endpoints, image optimization	Done
Session 15: CI/CD	Seed data, developer experience, CI pipeline	Done
Session 16: QA	15 bug fixes, security hardening, code quality	Done

Key Features

GEZMA Agent (B2B Dashboard)

Feature	Detail
Multi-tenant CRM	Manajemen jamaah lengkap — profil, dokumen, pembayaran, status tracking
Paket & Trip	Buat paket umrah, kelola trip, assign jamaah, kapasitas otomatis
Pembayaran	Tracking DP/lunas, payment records, integrasi gateway (ready)
Laporan & Analytics	Dashboard real-time, chart pendapatan, statistik jamaah
AI Assistant	Chat widget bertenaga Gemini 2.0 Flash — bantu operasional
Gamifikasi	Poin, badges, leaderboard antar agency — meningkatkan engagement
White-label Branding	Kustomisasi logo, warna, tema per agency
Team Management	Role & permission granular (owner, admin, staff, marketing)
PWA	Installable, offline support, push-ready
2FA Security	TOTP-based two-factor authentication

GEZMA Pilgrim (B2C Portal)

Feature	Detail
Trip Tracking	Jadwal perjalanan, itinerary, status real-time
Manasik Online	Materi belajar umrah, progress tracking per jamaah
Doa & Dzikir	Koleksi doa umrah, favorit, audio (ready)
Dokumen	Upload & tracking dokumen (paspor, visa, dll)
Roommate Matching	Preference matching untuk teman sekamar
Referral System	Kode referral, tracking, rewards

Remaining — Menuju Go-Live

Integrasi API Production

Seluruh service sudah disiapkan dengan mock data. Tinggal menghubungkan ke API real:

Service	Kegunaan	Effort	Status
Nusuk API	Registrasi visa umrah, tracking status ke Kemenag Saudi	Medium	Mock Ready
Payment Gateway	Midtrans / Xendit / Duitku — pembayaran online	Medium	Webhook Ready
WhatsApp API	Notifikasi & broadcast ke jamaah	Low	Mock Ready
UmrahCash	Penukaran mata uang SAR/IDR	Low	Mock Ready

Infrastructure Production

Item	Status	Catatan
VPS & Docker	Ready	Docker Compose + Traefik configured
HTTPS / SSL	Ready	Let's Encrypt via Traefik
Database Indexes	Done	25+ indexes untuk query performance
S3 Storage	Config Needed	Code ready, perlu set credentials
Redis (Rate Limiter)	Future	Saat ini in-memory, cukup untuk awal
Mobile App (Flutter)	Future	PWA sudah cukup untuk fase awal

Estimasi Menuju Go-Live

Milestone	Scope
Integrasi Payment Gateway	Koneksi Midtrans/Xendit, testing transaksi real
Integrasi WhatsApp	Notifikasi otomatis ke jamaah
S3 Storage Setup	Upload dokumen & foto ke cloud storage
User Acceptance Testing	Testing oleh travel agent pilot
Soft Launch	Onboard 3-5 PPIU sebagai early adopter

Quality & Security

Testing

451	40	5	0
UNIT TESTS	TEST SUITES	E2E SPECS	TS ERRORS

Security Measures

- **Authentication:** JWT httpOnly cookie + bcrypt password hashing + TOTP 2FA
- **Authorization:** Role-based (owner/admin/staff/marketing) + granular permission per-user
- **Multi-tenant Isolation:** Semua query difilter by agencyId, data antar agency terpisah total
- **Input Validation:** Zod schema di setiap API endpoint
- **Rate Limiting:** Login & sensitive endpoints dilindungi rate limiter
- **CSP Headers:** Content Security Policy aktif
- **Environment Validation:** Zod schema untuk semua env vars saat startup
- **Activity Logging:** Semua create/update/delete tercatat di audit log
- **Session 16 QA:** 15 bug/security fixes — termasuk race condition, missing permission checks

Code Quality

- TypeScript strict mode — 0 errors
- ESLint + lint-staged + pre-commit hooks
- Centralized error handling & structured logging (JSON in prod)
- Consistent API pattern across 138 endpoints
- 45 dependencies only (minimal, no bloat)
